## GENERAL INFORMATION

On behalf of the Organizing Committee of the conference:

### **Gastrulation reloaded: Developing engineering and evolving the body plan**

#### **Scientific committee:**

Jerome Gros (Institut Pasteur, FR)  
Kate McDole (LMB Cambridge, EN)  
Liliana Solnica-Krezel (Washington University, USA)  
Benjamin Steventon (Cambridge University, EN)  
Pavel Tomancak (Dresden, DE)

This conference brings together scientists working on topics related to gastrulation, the process by which pluripotent stem cells internalize and differentiate into embryonic germ layers while simultaneously establishing the main axes (anteroposterior, dorsoventral and left/right) of the embryo. Gastrulation encompasses a wide range of fundamental aspects of biology that will be covered during the conference, including **gene regulation, fate specification, evo-devo, stem cell biology, morphogenesis, mechanics, signal transduction**, etc. in the context of early embryonic development. We aim to capitalize on the renewed interest in gastrulation with the advent of stem cell-based embryo models (gastruloids) recapitulating this process in vitro and in humans and whose engineering is emerging as a new frontier in the field of developmental biology. We will offer a venue where advances in the fields of developmental biology, evo-devo and engineering can be confronted to promote the emergence of new approaches, technologies and hypotheses, which will be mutually beneficial for all fields.

This conference builds on the Virtual Gastrulation Zoom Talk (VGZT) seminars, a very popular online talk series that emerged during the Covid-19 lockdown in 2020 and has been ongoing since then, with 2500 followers on X ([vgzt.weebly.com](https://vgzt.weebly.com)).
